

Tandems Project

Encouraging the creation and participation in energy communities for a just and accelerated energy transition.

Tandems will focus on developing and implementing an open collaboration model between energy communities, citizens and local authorities in order to encourage the development of energy communities as vehicles for energy transition and drivers for positive planning of energy policies.

The project aims to build a replicable method of cooperation, variety of working models and trainings as well as create a wide supporting framework for community energy through empowering and facilitating citizens to participate in clean energy transition. Tandems brings together three regions: the province of Antwerp in Flanders in Belgium, the region of Achterhoek in provincie Gelderland in the Netherlands, and two municipalities, Burgas and Gabrovo, in diverse regions in Bulgaria in order to activate 67 community energy projects, support and/or create 23 citizen-led initiatives and trigger RES generation of 10.15 GWh/year.

Tandems is a 36 month project.

Tandems unites 11 partners from 4 different countries under the coordination of Kamp C.

Tandems encourages the creation and participation in energy communities for a just and accelerated energy transition.

Tandems receives an EU funding contribution of 1.75 million euro.
